

# MALAYSIA BOWLERS ANALYSIS

---

## LAST ODI CYCLE

DHRUMIT ATUL MEHTA

## TOP 3 WICKET-TAKERS

---

### Pavandeep Singh

Bowling Style: **Slow Left arm Orthodox**  
Matches Bowled: **14**  
% Matches Bowled in which Played: **100%**  
Wickets Taken: **15**  
Strength: **In-swinging arm ball at the start**

### Anwar Rahman

Bowling Style: **Slow Left arm Orthodox**  
Matches Bowled: **9**  
% Matches Bowled in which Played: **100%**  
Wickets Taken: **12**  
Strength: **Skiddy left-armers angling in**

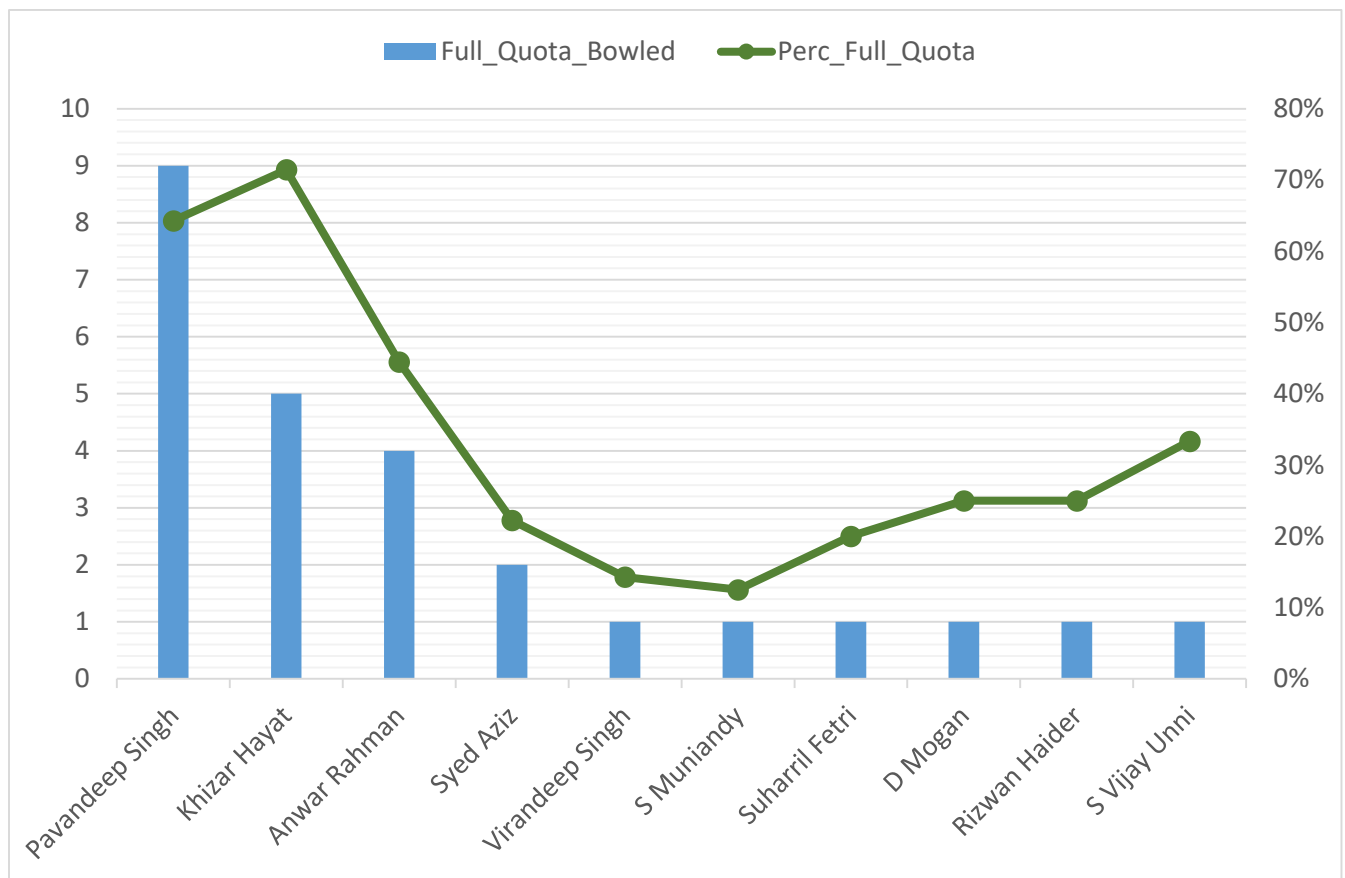

### Rizwan Haider

Bowling Style: **Left arm Medium**  
Matches Bowled: **4**  
% Matches Bowled in which Played: **100%**  
Wickets Taken: **12**  
Strength: **Swings both ways**

## MOST FREQUENTLY USED BOWLERS:

The higher the bar, the more time he has finished his full quota. The higher the line plot, the more the probability that he will bowl his full 10 overs whenever he plays. So, for example, Khizar Hayat has only bowled his full quota 5 times, so his bar is lower. However, since he has bowled in only 7 matches, he has bowled his quota 5 times out of 7, making him more likely to complete his full spell whenever he bowls. And that's why his line plot is higher than everyone else.

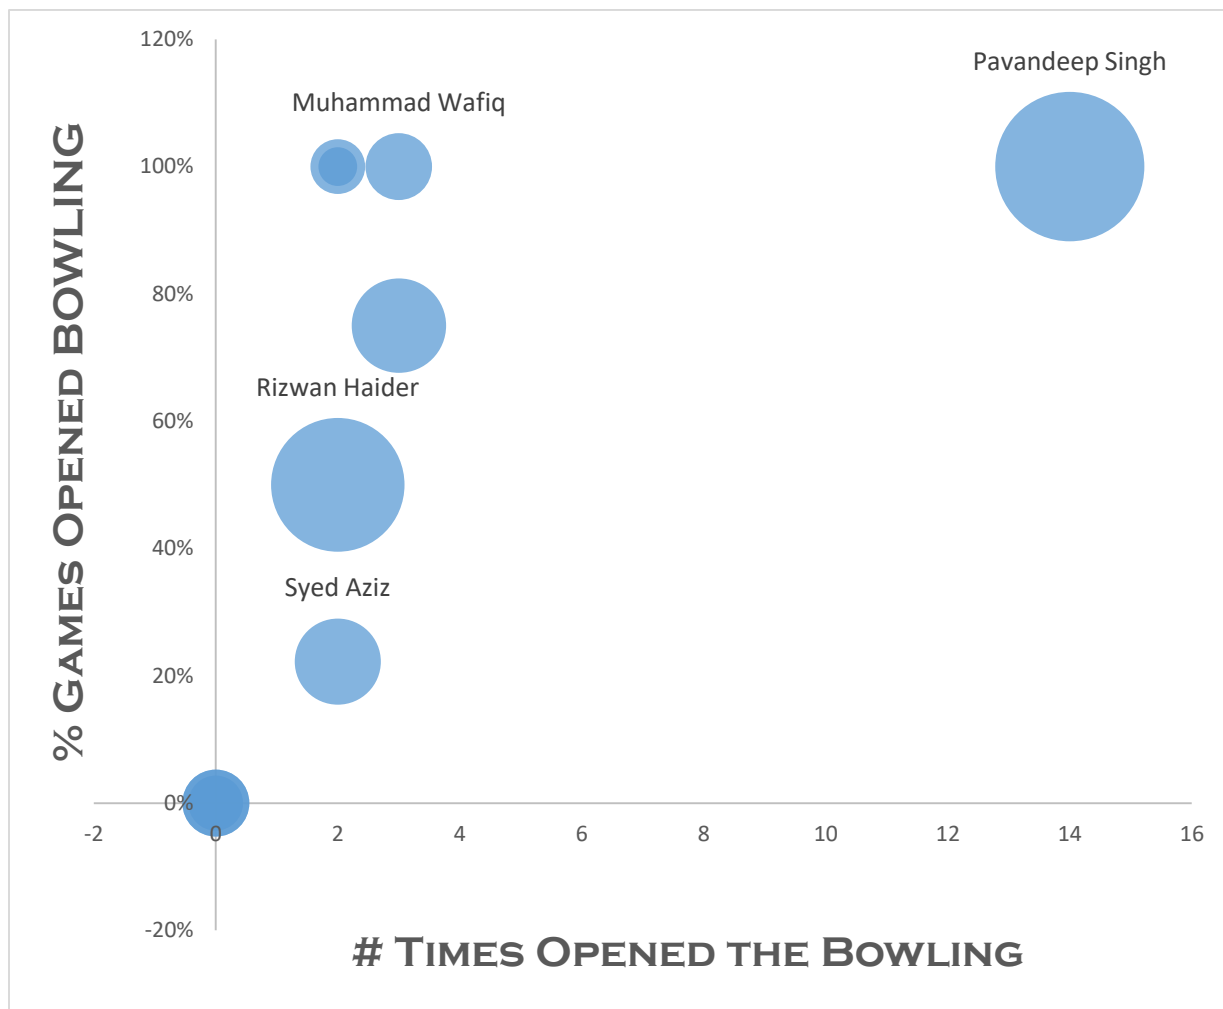

**Takeaway (what do we see):** Pavandeep bowls his full quota about 65% of the time, and Khizar does so about 70% of the time.

**Insight (what does this tell us):** Malaysia's go-to bowlers are Pavandeep Singh, Khizar Hayat and Anwar Rahman. They are the most likely to bowl their full quota in a game.

**Implications (what does this mean for us):** Given that these 3 are spinners, we have to be ready to face at least 30 overs of spin.

## OPENING STRIKE BOWLERS:

The vertical axis of the graph (height of the bubble) represents the percentage of games a player has played in which he has opened the bowling. The horizontal axis represents how many times a player has opened the bowling. And the size of each bubble represents how many wickets each player has taken in the first 10 overs. For example, Pavandeep Singh and Rizwan Haider have taken the most wickets in the first 10 Overs, but Rizwan has bowled in that phase in lesser games than Pavandeep.

Takeaway (what do we see): Pavandeep has opened the bowling in 14 out of 14 games played. Mohammed Wafiq has opened the bowling in every game that he has played. Rizwan Haider has 14 wickets in the first 10 overs, while Pavandeep has 15.

Insight (what does this tell us): Pavandeep has taken all his wickets in the powerplay, hinting that he is not as effective in the middle-overs. Rizwan Haider and Muhammad Wafiq are left-arm pacers, with Rizwan being a 36-year old swinger of the ball and Wafiq being a young gun who bowls some serious pace.

Implications (what does this mean for us): We need to be ready to face a left-arm spinner and a left-arm pacer in the first 10 overs. Be aware of Pavandeep's in-swinging arm ball.
